

Table of content

Foreword	7
The Author	9
Acknowledgments	11
1. Introducing Siril	13
1.1. Free and open, for what purpose?	14
1.2. Philosophy of Siril	14
1.3. Minimum requirements	14
1.4. Download and install Siril	15
1.4.1. Installation under Microsoft Windows	15
1.4.2. Installation under Apple macOS	17
1.4.3. Installation under Linux	17
1.5. The graphical user interface	17
1.6. Siril preferences	18
1.7. File formats	19
1.8. Sequences	20
1.9. The command line	21
1.10. Scripts	21
1.10.1. Siril scripts	21
1.10.2. Python scripts	23
2. Preprocessing	27
2.1. Image calibration	28
2.2. Example of preprocessing a series of images	29
2.2.1. Conversion of source files	29
2.2.2. Creation of master frames	30
2.2.3. Use of libraries	33
2.2.4. Calibration of images	34
2.2.5. Case of narrowband filters for color sensors	35
2.2.6. Registration of images	36
2.2.7. Image analysis	42
2.2.8. Final stacking	44
2.2.9. Mosaic	47
2.3. Preprocessing multiple sessions	50
2.3.1. Calibration of multisession images	50
3. The case of SER files with lucky deep sky imaging	53
3.1. Calibration of the SER file	55

3.2. Alignment of the SER file	55
3.2.1. <i>Stabilization of the sequence</i>	55
3.2.2. <i>1-2-3 star registration</i>	56
3.3. Stacking a SER file	58
4. Processing	61
4.1. Understanding the histogram	62
4.2. Seeing the invisible	62
4.3. Working on regions of interest (ROI)	64
4.4. Background extraction	65
4.4.1. <i>Native gradient extraction</i>	65
4.4.2. <i>Background extraction using GraXpert and AI</i>	66
4.5. Color calibration	68
4.5.1. <i>Case of monochrome sensors</i>	69
4.5.2. <i>Color calibration of color images</i>	70
4.6. Deconvolution	74
4.6.1. <i>Native deconvolution</i>	74
4.6.2. <i>AI based deconvolutions</i>	77
4.7. Noise reduction	77
4.7.1. <i>Types of noise in astronomy</i>	78
4.7.2. <i>Native noise reduction</i>	78
4.7.3. <i>Noise reduction via GraXpert and AI</i>	79
4.8. Separating stars from the rest of the image	81
4.9. Histogram stretching	84
4.9.1. <i>Asinh transformation</i>	86
4.9.2. <i>Histogram transformation</i>	86
4.9.3. <i>Generalized Hyperbolic Stretch (GHS)</i>	87
4.9.4. <i>Python script: Statistical Stretch</i>	94
4.9.5. <i>Curves transformation</i>	95
4.10. Recombining the stars	95
4.11. Doing mathematics with pixels	96
4.11.1. <i>Continuum Subtraction</i>	98
4.11.2. <i>Star Reintegration</i>	98
4.12. Other Processing Tools	100
5. Doing Analysis and Science with Siril	103
5.1. Image Analysis	104
5.1.1. <i>Statistics</i>	104
5.1.2. <i>Noise Estimation</i>	105
5.1.3. <i>Aberration, Tilt, and Distortion Inspectors</i>	105
5.1.4. <i>Dynamic PSF</i>	108
5.2. Astrometry	109
5.2.1. <i>Annotate Function / Cone Search</i>	113
5.2.2. <i>Annotate Function / Show</i>	115
5.2.3. <i>Annotate Function / Search Object</i>	117
5.3. Photometry	117
5.3.1. <i>Principle of Photometry</i>	117
5.3.2. <i>Case of Color Images</i>	118
5.3.3. <i>Photometry on a Single Image</i>	119
5.3.4. <i>Exoplanet Transit</i>	120
5.4. Intensity Profile Measurement	126
5.5. Conclusion	128

6. Practical Cases	131
6.1. LRGB Preprocessing	132
6.1.1. <i>Preparing the Folders on the Computer</i>	132
6.1.2. <i>Preparing the Master Files</i>	133
6.1.3. <i>Preprocessing the Luminance (L) Images</i>	137
6.2. LRGB Processing	144
6.2.1. <i>RGB Image composition and Processing</i>	144
6.2.2. <i>Luminance Processing</i>	154
6.2.3. <i>LRGB Combination</i>	154
6.3. SHO Mosaic	157
6.3.1. <i>Creating the mosaics for each filter</i>	157
6.3.2. <i>Registering the images</i>	158
6.3.3. <i>SHO and RGB composition</i>	160
6.4. Multisession dual-band processing	165
6.5. RGB processing	170
6.6. Processing moving objects	173
6.6.1. <i>Image registration</i>	175
6.6.2. <i>Didymos animation</i>	175
6.7. Comet processing	180
6.8. Writing your own scripts	184
6.8.1. <i>Creating a Siril script to process images without darks, flats or biases</i>	184
6.8.2. <i>Creating a Python script to process images without darks, flats or biases</i>	185
6.8.3. <i>Advanced Python script example: spectral analysis with Gaia DR3</i>	186
Glossary	190
